Project Zero Roulette - Revision 11 Summary

Date: April 1, 2026 **Author:** Manus AI

This document outlines the changes implemented in Revision 11 of the Project Zero Roulette Progressive Web App (PWA).

1. Numpad Auto-Submit Behavior

The numpad behavior has been streamlined to improve the speed of data entry during live sessions. Previously, users were required to select a number and then press a separate “Place Spin” button. In Revision 11, tapping any number on the numpad immediately submits the spin. The “Undo” button remains available to quickly correct any accidental entries.

2. Session History Table Header Updates

To reduce cramping and improve readability on mobile devices, the column headers in the Session History table have been updated:

- **“Zeros Stake”** has been changed to **“0’s Stake”**
- **“Balance”** has been abbreviated to **“Bal.”**

3. Side Bet Description Shortening

The descriptions for side bets in the Session History table have been significantly shortened while retaining the dollar amount. This change ensures that the table remains clean and easy to read, even on smaller screens. The new formats are as follows:

- “Parity odd (70)”$isnow**”Odd$(70)”**

- “Color red $(50)”isnow**”Red$(50)”**
- “Dozen 1 $(30)”isnow**”1/12$(30)”**
- “Column 2 $(40)”isnow**”Col2$(40)”**

Next Steps

For the next session, we will prepare a full historical changelog covering Revisions 1 through 11. We will also discuss the app monetization strategy, including the choice between Capacitor and React Native, deployment to the iOS App Store and Google Play Store, and implementing a subscription model with user authentication.
